📍 Karachi, Pakistan

PROFESSIONAL SUMMARY

- Used Kubernetes (CKA Certified), GCP, AWS, Jenkins, and Docker to automate deployments and manage scalable infrastructure.
- Applied Terraform, Helm, and scripting to improve monitoring, system performance, and cloud security.
- Developed Evora, a platform that helps people in Pakistan easily find and book event services like halls, catering, and vehicles, solving the problem of fragmented event planning.
- Strong problem solver with leadership experience and an ability to work effectively in cross-cultural teams.
- Certified in Kubernetes Administrator, Google Cloud Cybersecurity, and Cloud Computing Foundations.

EDUCATION

FAST – National University of Computer and Emerging Sciences *Karachi, Pakistan*
BSCS | CGPA: 3.33 *Sep 2021 – June 2025*

EXPERIENCE

Paysys Labs *Hybrid*
DevOps Engineer *Aug 2025 – Present*

- Built GitLab CI/CD pipelines by automating tests and deployments, cutting failures by 35% and release time from hours to minutes.
- Managed Kubernetes clusters by automating scaling and recovery, ensuring 99.9% uptime for RTGS fintech apps.
- Optimized Dockerfiles by removing redundancies and caching layers, reducing build time by 45% and speeding developer feedback.
- Led DevOps workshops using real bank projects to teach Prometheus/Grafana, mentoring 20+ engineers and improving monitoring practices.

SKILLS SUMMARY

Languages	YAML, JavaScript, Bash, Python, SQL
DevOps Tools	Docker, Kubernetes, Jenkins, Git, Ansible, Terraform, Helm
Monitoring	Prometheus, Grafana, ELK Stack
Cloud	Google Cloud Platform (GCP) – IAM, Compute Engine, Cloud Storage, VPC
Pentesting Tools	Burp Suite, Metasploit, SQLMap, Wireshark
Networking	OSI Model, TCP/IP, DNS, Subnetting, Firewalls
Linux	User Management, Permissions, File System, Shell Scripting
Soft Skills	Leadership, Public Speaking, Time Management

PROJECTS

Kubernetes-based 3-Tier Application Deployment

- Faced slow and error-prone manual deployment of a multi-tier app, so I used Docker to build images and deployed them on Kubernetes using Deployments, Services, Ingress, Secrets, and ConfigMaps, this made the process 70% faster and more consistent.
- Managed storage with PersistentVolumes and Claims, and set resource quotas and limits to avoid crashes and overuse, this improved system reliability by around 40
- Integrated Prometheus and Grafana via Helm charts for real-time monitoring; detected issues 60% faster compared to manual checks. Also explored ELK stack to track logs and troubleshoot errors efficiently.

Data Breach Response (Google Cloud Capstone)

- Found and fixed cloud security risks such as open ports and public storage, shut down risky virtual machines and block unwanted access, reducing the risk of breach by 75%.
- Set up logging and monitoring on all resources, helped track any issues early and made sure that the setup followed Google Cloud's best security practices.

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA) *KodeKloud, Sep 2025*
- Google Cloud Computing Foundations Certificate *Google Cloud, Jul 2024*

ACHIEVEMENTS

- Secured 1st position and received Gold Medal in Spring 2024 Semester.
- Head of the Offensive Security Team, ACM.
- Helped startups grow by creating websites and improving SEO rankings.
- Best Position Paper Award, Habib University Model United Nations.
- Organized and participated in a 12-month international book club across borders.
