Best Position Paper Award

Muhammad Naimatullah Khan

DevOps Engineer | 2x Gold Medalist | Enabling Speed, Scale & Stability

Karāchi, Sindh, Pakistan

Summary

I fix things before people notice they're broken, and sometimes I fix things people didn't even know needed fixing.

I'm a DevOps Engineer working on fintech infrastructure that handles real financial transactions across multiple countries. Downtime here isn't just an inconvenience, it's a serious business problem. That pressure taught me to build systems that are reliable, not just good on paper.

What I've Actually Solved

- Engineers were manually jumping between 20+ services just to trace one transaction, copy-pasting data, wasting time. I built an automated workflow that eliminated this entirely. Nobody asked me to. I just saw the problem and fixed it.
- Deployment failures were hurting release cycles, I built CI/CD pipelines that reduced failures by 35%
- Issues were hard to catch early, I set up ELK Stack logging that improved detection time by 60%
- Slow Docker builds were killing developer momentum, I optimized them and cut build times by 45%
- Data loss risk was real, I designed a full disaster recovery system with 100% validated data recovery

What I Work With

- Container & Orchestration: Kubernetes (CKA Certified), Helm, Docker, EKS Anywhere
- CI/CD: GitLab CI, Jenkins, GitHub Actions
- Monitoring & Logging: ELK Stack, Prometheus, Grafana
- Cloud: AWS, GCP
- Security: Trivy, SonarQube, penetration testing, API security
- Scripting & Code: Python, Bash, YAML

Certifications

- Certified Kubernetes Administrator (CKA)
- Google Cloud Computing Foundations
- Google Cloud Cybersecurity

Achievements

- Gold Medalist — 1st Position, FAST NUCES (twice)
- Head of Offensive Security Team, ACM Student Chapter, FAST NUCES
- Trained 20+ engineers from partner banks on Kubernetes and ELK Stack

How I Work With People:

I've trained engineers, mentored teammates, and explained complex systems to non-technical people. I don't just solve problems quietly, I make sure the people around me understand what changed and why. Collaboration and clear communication are things I take seriously.

I'm always open to connecting with people working on infrastructure, security, or anything in between. Let's talk.

Experience

Paysys Labs

Associate DevOps Engineer

August 2025 - Present (11 months)

Karāchi, Sindh, Pakistan

Infrastructure & Reliability

- Managed Kubernetes (EKS Anywhere) infrastructure for fintech deployments across 2 countries (Togo & Tanzania), maintaining 99.9% uptime across 20+ Java microservices
- Implemented HPA and rollback mechanisms to handle peak transaction loads without service disruption

- Deployed Emissary-Ingress and LoadBalancers to securely expose services to external banking partners

CI/CD & Automation

- Built GitLab CI/CD pipelines for 20+ Java microservices, reducing deployment failures by 35% and cutting release onboarding from hours to minutes
- Created reusable Helm templates (Deployments, Services, ConfigMaps) that eliminated 90% of repetitive manual configuration work
- Automated end-to-end transaction search workflow across all services, replacing a fully manual process that required engineers to jump between multiple services and copy data by hand, recognized by the team for this initiative

Observability & Logging

- Deployed full ELK Stack (Filebeat + Logstash + Kibana) with custom filters, dashboards, and alerting across all Kubernetes services, reducing issue detection time by 60%

Disaster Recovery

- Designed end-to-end DR pipeline using Velero, OpenEBS, and MinIO (S3-compatible), achieving 100% validated data recovery capability

Security & Infrastructure

- Built a private Docker registry with custom Nginx reverse proxy UI, SSL, and environment tagging (staging/production) for full build traceability
- Applied DevSecOps practices using Trivy and SonarQube across CI/CD pipelines

Training & Mentorship

- Conducted hands-on workshops for engineers at external partner banks on ELK Stack logging and Kubernetes best practices
- Mentored 20+ engineers across multiple institutions

Tech Stack:

Kubernetes • EKS Anywhere • Helm • Docker • GitLab CI • ArgoCD • ELK Stack • Prometheus • Grafana • Velero • MinIO • OpenEBS • Emissary-Ingress • Trivy • SonarQube • Terraform • Ansible • AWS • GCP • Linux • Bash • Python

VentureDive

QA Intern

March 2025 - July 2025 (5 months)

- Built a Selenium test framework using config files, Extent Reports, and data-driven testing. Increased automation coverage by 40% and saved 25% manual testing time.
- Automated critical UI flows of the Careem Dubai app using Maestro. Helped ensure 100% pass rate before every release.
- Found and reported 3+ major security flaws in Askeddy (like unlimited OTP attempts, no account lockout). Helped reduce potential user risk by 70%.
- Wrote clean, reusable BDD test cases with Cucumber. Improved onboarding for new testers and cut test case writing time by 30%.

SkillReactor

Campus Ambassador

January 2023 - April 2023 (4 months)

Had the opportunity to grow both personally and professionally while promoting SkillReactor on campus. Gained hands-on experience in marketing, communication, and leadership.

Grateful for the support from the SkillReactor team and proud of the progress made during the program. Looking forward to applying these skills in future roles!

Education

National University of Computer and Emerging Sciences

Bachelor's degree, Computer Science · (August 2021 - September 2025)

The Citizens Foundation College

Intermediate , Pre-Engineering · (June 2019 - July 2021)

The Citizens Foundation School

Matriculation , Science · (March 2015 - April 2019)
